Expanding the profitability of offset printing

Printing  
just got  
better!

Combining state of the art technology with years of research & development, VIM is a leading manufacturer of imaging and printing products that expand the profitability of offset printing by providing superior quality alongside higher cost efficiency.

The company focuses on process-less, daylight operated plate technologies that eliminate the plate's chemical development, which makes offset printing expensive and labor intensive. VIM believes that cost-efficiency is not a substitute for quality, and that unique and productive solutions are achieved through extensive research and technological innovation.

Our experienced management and skilled development team have over 30 years experience in digital imaging and printing technologies, bringing new ideas and superior quality to the printing industry.

## Leading Technology

VIM's proprietary patented waterless and process-less plate technologies provide significantly improved performance, higher cost efficiency and superior quality output.

## Exceptional Print Quality

The unique technology implemented by VIM in its products delivers perfect image registration and exceptional color reproduction in the most demanding images – including skin tones, half tones and metallic colors.

## User Friendly Products

All of VIM's products are fully compatible with existing printing presses and do not require any changes in setup or workflow.

## Environment Friendly

VIM's waterless and process-less technology delivers pollution free products. VIM's chemical free plates are a testimonial of VIM's commitment to developing products that make our world a healthier place to live in.

## High Manufacturing Standards

VIM's multi-million dollar production facility incorporates the most advanced equipment and materials to ensure the manufacturing of the highest quality products. Quality control procedures ensure 100% compliance with our published specifications.

## The Promise of The Future

VIM is constantly striving to push the technology envelope for digital printing plates to the next level. Currently under development are several new products that will enhance the print world as we know it, including process-less plates for standard offset printing presses.
